

## SKY WHEELCHAIR LIFT

Horizontal split twin pillar hydraulic platform lift

The SKY series is a completely automatic wheelchair lift designed to transfer an occupant in a wheelchair in and out of the vehicle. It features a horizontal split platform that folds up into itself when stowed allowing the driver of the vehicle to still see out the back window for rear vision.

The lifts movements are fully hydraulic and operated using an easy to use 2 button corded remote with the option of a wireless remote. Due to its simple design the lifts have very low maintenance costs and can be easily serviced.

There are various platform widths and lengths available to suit the needs of the wheelchair occupant and to ensure the user has ample room when transferring in and out of the vehicle. This lift is primarily designed for installation into the rear of the vehicle however on some vehicles can also be installed into the side sliding door position.

Specifications of the various models available include:

**SKY1150 Light**

- Platform size: 1150mm x 720mm
- Loading capacity: 320 kg
- Max. floor height: 880mm
- Total unit height: 1125mm
- Unit weight: 142 kg
- Electrical system: 12-24 Volt
- Emergency manual pump

**SKY1250**

- Platform size: 1250mm x 800mm
- Loading capacity: 350 kg
- Max. floor height: 920mm
- Total unit height: 1220mm
- Unit weight: 142 kg
- Electrical system: 12-24 Volt
- Emergency manual pump

**SKY1395**

- Platform size: 1400mm x 800mm
- Loading capacity: 350 kg
- Max. floor height: 920mm
- Total unit height: 1220mm
- Unit weight: 147 kg
- Electrical system: 12-24 Volt
- Emergency manual pump

**SKY1400**

- Platform size: 1400mm x 900mm
- Loading capacity: 320 kg
- Max. floor height: 920mm
- Total unit height: 1220mm
- Unit weight: 151 kg
- Electrical system: 12-24 Volt
- Emergency manual pump
